

Elsayed Abdulrahman

Backend & AI Agents Engineer

• Open to roles · Munich / EU · EU Blue Card holder

✉ el.sid.kamal.1999@gmail.com ·  linkedin.com/in/elsayed85 ·  github.com/elsayed85

SUMMARY

Backend & AI Agents Engineer — 6+ years of production backend, 2+ years shipping multi-agent AI systems. Currently Team Lead, Backend & GenAI at innoscripta SE (Munich), promoted from Senior in 9 months. Build multi-agent orchestration, MCP tool integration, RAG, and eval-driven pipelines for regulated EU industries (EU AI Act, GoBD).

EXPERIENCE

innoscripta SE

Munich, Germany · April 2025 – Present

Clusterix is an enterprise platform that automates R&D documentation, funding applications, and audit-ready compliance for companies in automotive, aerospace, biotech, pharma, and manufacturing.

Team Lead, Backend & GenAI Engineering · January 2026 – Present · Munich, on-site

- Promoted to Team Lead in 9 months. Lead backend and GenAI engineering for Clusterix — technical direction, architecture, and mentorship across the stack.
- Design and ship multi-agent systems on a graph-based orchestration framework (supervisor, planner→executor, router, human-in-the-loop); build MCP servers and clients that expose production systems as well-typed, observable tools.
- Own the agent evaluation and observability stack: distributed tracing (OpenTelemetry) across the full agent loop and custom LLM-as-judge regression suites that gate deployments.
- Integrate multiple LLM providers via a gateway abstraction with provider-native prompt caching for cost and latency control; per-user long-term memory and dynamic context for token-budget management.
- Deploy on Kubernetes with CI/CD pipelines; designed prompt/model versioning, audit logs, and human-oversight workflows aligned with EU AI Act and GoBD obligations.

Senior Software Engineer · April 2025 – December 2025 · Remote

- Built production GenAI backend services in Python (FastAPI) for Clusterix.
- Shipped multi-agent RAG and document-processing pipelines on the orchestration framework across multiple vector databases.
- Established eval-driven development: distributed traces, custom evaluation harnesses, and regression gates in CI.

Waseet.net

Senior Software Engineer · Cairo, Egypt · October 2023 – April 2025

- Led a large-scale scraping platform for high-volume ingestion across heterogeneous sources.
- Architected a multi-tenant SaaS dashboard (Filament + Laravel) with client isolation and self-service operations.
- Designed a high-performance RabbitMQ queue system (prioritized workers, dead-letter handling); built Kafka migration pipelines from Couchbase to MongoDB.

- Hardened authentication against DDoS and credential-stuffing attacks with rate limiting and abuse detection.

EARLIER EXPERIENCE

Software Developer (Part-time) — Digital Roots GTC · Remote · 2023 – 2024

Modernized legacy Laravel codebases; integrated payment gateways with idempotency, retry, and reconciliation logic; improved cross-service API performance.

Backend Developer (Contract) — Cloudvests · Remote · 2021

Built an auction-data scraping and normalization system across competitive sources with advanced filtering; deployed configurable dashboards on AWS Lambda + Docker.

Backend Developer (Freelance) — Independent · KSA · KW · EG · 2020 – 2021

Delivered Filament/Laravel/MySQL dashboards, real-time notifications, and scalable third-party API integrations for clients across the GCC.

SKILLS

Languages — Python · TypeScript · JavaScript · PHP · SQL

AI Agent Stack — LangGraph · LangChain · MCP (Model Context Protocol) · Pydantic AI · CrewAI · OpenHands SDK · DeepAgents · AG2 / AutoGen

LLMs & Providers — Anthropic Claude SDK · OpenAI SDK · Google Gen AI (Gemini) · Ollama · LiteLLM · OpenRouter · Portkey · Instructor · prompt caching

RAG & Memory — pgvector · Qdrant · Pinecone · Chroma · text-embedding-3 · Gemini embeddings · hybrid search · LangChain long-term memory · Mem0 · Zep · Letta

Eval, Safety & Compliance — LangSmith · Langfuse · OpenTelemetry · LLM-as-Judge · regression harnesses · NeMo Guardrails · Lakera · LLM Guard · EU AI Act · GoBD · prompt/model versioning

Backend & APIs — FastAPI · Laravel · Filament · Node.js · gRPC · REST · WebSockets · SSE · asyncio

Data & Messaging — PostgreSQL · MySQL · MongoDB · Redis · Couchbase · DynamoDB · Elasticsearch · Celery · Kafka · RabbitMQ

Infra, Frontend & Specialties — Docker · Kubernetes · AWS · NGINX · Prometheus · Grafana · GitLab CI · React · React Native · reverse engineering (Android, Electron, Burp Suite) · large-scale scraping (Playwright, Scrapy) · voice (Whisper, Deepgram, ElevenLabs) · OCR

TALKS

Build Your Own MCP Server — Tek Podcast Bel-Arabi (Ahmed Elemam, 53.8K subscribers) · Live stream, June 9, 2025 · 7,000+ views

End-to-end walkthrough: built an MCP server from scratch and a LangGraph agent that consumes its tools via an MCP client — live debugging, GitHub Copilot integration, full per-step chat logs.

EDUCATION

B.Sc. Computer Science — Mansoura University
2017 – 2021 · Grade A
Focus: bioinformatics & computational biology

CERTIFICATIONS

Apache Kafka Series — Udemy · Sep 2024
Open-Source for Web Development — ITI · 2020

LANGUAGES

Arabic — Native
English — Professional working
German — Elementary
